

## Technical Information on the storage of GHH RAND Compressor airend lubricants Ultralube and Ultralube F

Lubricants usually do not have a shelf life as opposed to food, but they can still age over time. We therefore recommend to provide for certain storage conditions and follow some rules in order to prevent premature ageing:

- Store in accordance with local regulations.
- Store in original container.
- Protect from direct sunlight.
- Store in a dry, cool and well-ventilated area.
- Keep away from food and beverages.
- Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers.
- Use appropriate containment to avoid environmental contamination.
- Avoid big temperature deviations. Optimal storage between 10 – 20°C.
- Protect from freezing.

Places for storing lubricants are subject to legal regulations which may vary depending on the region. Make sure to follow these regulations in all cases. The lubricants Ultralube and Ultralube F are oils without solid matter. When all of the above recommendations are followed, the storage time is 5 years. Please note the production date, any additional notes and storage rules on the labels.
