

Visualization (VX)

Simply add a VX Module to any X81 or X121 network, complete some basic configuration, connect to your Local Area Network (LAN) and view your compressed air system on your PC. No special software is required - just use a standard web browser such as Internet Explorer. With System Visualization you can monitor critical system and equipment parameters, drill down to individual compressors to view operational status and be alerted to any alarm messages. Additionally, depending on security level, users can custom configure the pressure control set points, the compressor sequence and schedule, select compressor utilization priorities and even some special remote control functionality... all from a connected PC. Managing and viewing your compressed air system has never been easier!

Features

- System status and control
- System performance monitoring / reporting
- Equipment status monitoring
- Equipment maintenance scheduler
- Graphing and trending tools
- Reporting tools
- Configurable event logs
- Warning and alarm monitoring
- Email messaging
- Fully field configurable
